## 3 Introduction

### 3.1 Safety Precautions

With your *Chameleon II Simulator* in hand, please take the time to read the precautions listed below in order to prevent preventable and unnecessary injuries and damage to you, other personnel or property. Read these safety instructions carefully prior to your first use of the product, as these precautions contain safety instructions that must be observed. After reading through this manual, be sure to follow it to prevent misuse of product.

### Caution! Read Carefully and do not disregard these instructions.

#### In the event of a failure, disconnect the power supply

Disconnect the power supply immediately and contact our sales personnel for repair. Continuing to use the product in this state may result in a fire or electric shock.

### If an unpleasant smell or smoking occurs, disconnect the power supply.

Disconnect the power supply immediately! Continuing to use the product in this state may result in a fire or electric shock. After verifying that no smoking is observed, contact our sales personnel for repair.

#### Do not disassemble, repair or modify the product.

This may result in a fire or electric shock due to a circuit shortage or heat generation. Contact our sales personnel prior to inspection, modification or repair.

#### Do not place the product on unstable surfaces.

Otherwise, it may drop or fall, resulting in injury to persons or the camera.

#### Do not use the product if dropped or damaged.

Otherwise, a fire or electric shock may occur.

### Do not touch the product with metallic objects.

Otherwise, a fire or electric shock may occur.

#### Do not place the product in dusty or humid environments, nor where water may splash.

Otherwise, a fire or electric shock may occur.

#### Do not wet the product or touch it with wet hands.

Otherwise, the product may fail, or it may cause a fire, smoking or electric shock.

#### Do not touch the gold-plated sections of the connectors on the product.

Otherwise, the surface of the connector may be contaminated by sweat or skin-oil, resulting in contact failure of a connector, malfunction, fire or electric shock due to static electricity discharge.

### Do not use or place the product in the following locations.

- Unventilated areas such as closets or bookshelves.
- Near oils, smoke or steam.
- Next to heat sources.
- A closed (and not running) car where the temperature becomes high.
- Static electricity replete locations
- Near water or chemicals.

Otherwise, a fire, electric shock, accident or deformation may occur due to a short circuit or heat generation.

#### Do not place heavy objects on the product.

Otherwise, the product may be damaged.

#### Be sure to discharge static electricity from body before touching any sensitive electronic components.

The electronic circuits in your computer and the circuits on the *Chameleon II Simulator* board is sensitive to static electricity and surges. Improper handling may seriously damage the circuits. In addition, do not let your clothing come in contact with the circuit boards or components. Otherwise, the product may be damaged.

### 3.2 Disclaimer

This product should only be used for image capturing and processing. **KAYA Instruments** will assume no responsibility for any damage that may ensue by the use of the camera for any purpose other than intended, as previously stated. Without detracting from what was previously written, please be advised that the company will take no responsibility for any damages caused by:

- Earthquake, thunder strike, natural disasters, fire caused by use beyond our control, wilful and/or accidental misuse and/or use under other abnormal and/or unreasonable conditions.
- Secondary damages caused by the use of this product or its unusable state (business interruption or others).
- Use of this product in any manner that contradicts this manual or malfunctions that may occur due to connection to other devices. Damage to this product that is out of our control or failure due to modification
- Accidents and/or third parties that may be involved.

Additionally, KAYA Instruments assumes no responsibility or liability for:

- Erasure or corruption of data caused by the use of this product.
- Any consequences or other abnormalities following the use of this product
- Repairs to this product are carried out by replacing it on a chargeable basis and not by repairing the faulty
  device. Non-chargeable replacement is offered for initial failure, as long as it is reported no later than two
  weeks post-delivery of the product.

### 4 Overview

The purpose of this document is to describe the provided functionality and features of KAYA's Camera Simulator. Camera connectivity and streaming can be easily achieved in few easy steps and almost no configurations. Camera control is provided through standard GenlCam interface subordinate to camera's descriptive schema (xml) file. Advanced features and custom configurations can be done to enhance streaming and image processing of camera output. These are available using interactive GenlCam interface and provided API functionality. SDK functionality is subject to hardware device and burned firmware capabilities. A firmware and software upgrade might be needed to support complete functionality set.

For more information about API functionality and SDK usage please refer to "Vision Point API Data Book". All the parameters described in this document are *Chameleon II Simulator* parameters and can be accessed from GUI Camera tab in the project navigator or from API using KYFG\_SetCameraValue and KYFG\_GetCameraValue function variations (and their sub-functions) call, with CAMHANDLE (Connected Camera Handle) instead of FGHANDLE (Frame Grabber Handle).

It is important to note that some parameters might vary slightly compared to this document or may be absent entirely, subject to the active firmware capabilities: a firmware upgrade might be needed to support complete functionality set. Please feel free to contact our team over at <a href="mailto:support@kayainstruments.com">support@kayainstruments.com</a> with any questions that may arise.

### 4.1 Directories and File Hierarchy

The directory hierarchy of Vision Point App as can be seen after a complete installation:

Figure 1 – Main directory and file hierarchy

Figure 2 – Examples and save directories

# 5 Hardware Information

The Hardware information contains parameters describing the currently connected Simulator board and includes device capabilities, basic connectivity details and currently running firmware. This information can be used to identify the specific card and its capabilities, and inform if a firmware update is needed to support complete functionality set. It can also help to indicate about certain performance issues. The hardware information parameters can be found in the following table:

Parameter	Description	Gen <i>Cam name</i>	Туре	Poss	sible values	Remarks
				Value	Gen <i>Cam name</i>	
Gen <i>Cam Cate</i>	gory: HardwareInformation					
Device Firmware Version	The firmware version of the device	DeviceFirmwareVersion	String			
Serial Number	Serial Number of the device	DeviceSerialNumber	String			
Device Revision	Revision of the device	DeviceRevision	Integer			
Maximum Links	Maximum available links on the device	MaxLinks	Integer			
PCIe Generation	Supported generation of connected PCIe	DevicePciGeneration	Integer	1,2,3		
PCIe lanes	Number of connected PCIe lanes	DevicePciLanes	Integer	1,2,4,8		
Core Temperature	Device CPU Temperature	DeviceTemperature	Integer			Temperature is in °C

Table 2 – Hardware information parameters

➤ Hardware Information					
Device Firmware Version	4.1.7.0				
Serial Number	0				
Device Revision	0				
Maximum available links	4				
PCle generation	3				
PCIe lanes	8				
Core Temperature	63				

Figure 3 – Hardware information parameters in Vision Point App

# 6 Device General Control

The Device Control contains manufacturer parameters describing the currently connected hardware device. The information includes device vendor name, basic manufacturer information details and device identifier. The "Device Reset" command can be used to resets the device configuration and parameters to its power up state. The device information parameters summarized in the following table:

Parameter	Description	Gen <i>Cam name</i>	Туре	Poss	sible values	Remarks
				Value	Gen <i>Cam name</i>	
Gen <i>Cam Cate</i>	gory: DeviceControl					
Device Vendor Name	Name of the manufacturer of the device	DeviceVendorName	String			
Device Model Name	The model of the device	Device Model Name	String			
Device Manufacturer Info	Extended manufacturer information about the device	Device Manufacturer Info	String			
Device Version	The version of the device	DeviceVersion	Float			
Device ID	Stores a camera identifier	DeviceID	Float			
Device Reset	Resets the device to its power up state	DeviceReset	Command	1 - Activate

# 7 Image Format Control

The Image Format Control is responsible for defining the output image dimensions and format type. The resolution of the image and output format will influence the maximum frame rate, which can be achieved.

Parameter	Description	Gen <i>Cam name</i>	Туре	Pos	sible values	
				Value	Gen <i>Cam name</i>	Remarks
Gen <i>Cam Cate</i>	egory: ImageFormatControl					
Width	Represents the actual image width expelled by the camera (in pixels)	Width	Integer	≥1		
Height	Represents the actual image height expelled by the camera (in pixels)	Height	Integer	≥ 1		
Width Max	Maximum width (in pixels) of the image. The dimension is calculated after horizontal binning, decimation or any other function changing the horizontal dimension of the image	WidthMax	Integer			
Height Max	Maximum height (in pixels) of the image. This dimension is calculated after vertical binning, decimation or any other function changing the vertical dimension of the image	HeightMax	Integer			
Offset X	Horizontal offset from the origin to the area of interest (in pixels)	OffsetX	Integer			
Offset Y	Vertical offset from the origin to the area of interest (in pixels)	OffsetY	Integer			
Pixel Format	Indicates the format of the	PixelFormat	Enumeration	0x00000101	Mono8	
	pixel to use during the generation			0x00000102	Mono10	
				0x00000103	Mono12

# 8 Acquisition Control

The Acquisition stream control section describes settings and state for data generation (commands and stream). Generation can be controlled trough executing the relevant commands from this category from the Frame Grabber side, after Chameleon II Simulator camera was detected. The acquisition control parameters are summarized in the following table.

Parameter	Description	Gen <i>Cam name</i>	Туре		Possible values	Remarks
				Value	Gen <i>Cam name</i>	
Gen <i>Cam Cate</i>	gory: AcquisitionControl					
Acquisition	Controls the acquisition mode	AcquisitionMode	Enumeration	0x00	Continuous	
Mode	of the device			0x01	SingleFrame	
				0x02	MultiFrame	
Acquisition Start	Starts the Acquisition of the device	AcquisitionStart	Command	1 - Activate		
Acquisition Stop	Stops the Acquisition of the device at the end of the current Frame	AcquisitionStop	Command	0 - Activate		
Acquisition Frame Count	Number of frames to be sent in MultiFrame	AcquisitionFrameCount	Integer	≥1		
Acquisition Reset	AcquisitionMode Resets the image acquisition logic and counters	AcquisitionReset	Command	1 - Activate		
Frame Rate	Controls the acquisition rate at which the frames are captured	AcquisitionFrameRate	Float	≥1		In units of Hz
Video Source	Type of video source for	VideoSourceType	Enumeration	0	Pattern

Figure 6 – Acquisition Control category in Vision Point App

# 9 Transport Layer Control

The Transport Layer Control section describes the characteristics of two main features:

### 9.1 Payload Size

Provides the number of bytes transferred for each image or chunk on the stream channel. This includes any end-of-line, end-of-frame statistics or other stamp data. This is the total size of data payload for a data block.

### 9.2 Device Tap Geometry

This device tap geometry feature describes the geometrical properties characterizing the taps of a camera as presented at the output of the device. The following table specifies the transport layer control parameters:

Parameter	Description	Gen <i>Cam name</i>	Туре	Pos	sible values	Remarks
				Value	Gen <i>Cam name</i>	
Gen <i>Cam Cat</i>	egory: TransportLayerControl					
Payload Size	Provides the number of bytes transferred for each image or chunk on the stream channel. This includes any end-of-line, end-of-frame statistics or other stamp data. This is the total size of data payload for a data block	PayloadSize	Integer			
Device Tap Geometry	This device tap geometry feature describes the geometrical properties characterizing the taps of a camera as presented at the output of the device	DeviceTapGeometry	Enumeration	1X-1Y		

Table 6 – Transport Layer Control parameters

Figure 7 – Transport Layer Control category in Vision Point App

# 10 Simulation Control

This section describes features and state for data generation in the Camera Simulator. The Trigger Control describes all features related to image acquisition using trigger(s), and the Timer Control lists all features that relates to control and monitoring of timers. The Simulation control parameters summarized in the following table.

Parameter	Description	Gen <i>Cam</i>	Туре	Possible values		Remarks
		name		Value	Gen <i>Cam name</i>	
Gen <i>Cam Cat</i>	egory: SimulationControl					
Link Discovery	Discovery speed settings	LinkDiscovery	Enumeration	0x010028	DISCOVERY_CXP_1	1.250 Gbps discovery speed
				0x010038	DISCOVERY_CXP_3	3.125 Gbps discovery speed
Bandwidth Utilization	Utilization percentage of set bandwidth	BandwidthUtilization	Float	0≤BW≤100		
Gen <i>Cam Cate</i>	egory: SimulationControl / Trigger	Control				
Trigger Mode	This feature controls the transmission trigger mode of	SimulationTriggerMode	Enumeration		FreeRun	
	the device			1	Triggered	
Trigger Activation	Specifies the activation mode of the trigger	SimulationTriggerActivation	Enumeration	0x0000	RisingEdge	See section 10.1
/ tetration	the trigger			0x0001	FallingEdge	
				0x0002	AnyEdge	
				0x0003	LevelHigh	
				0x0004	LevelLow	
Trigger Source	Specifies the internal signal or physical input Line to use as the trigger source. The selected trigger must have its SimulationTriggerMode set to On	SimulationTriggerSource	Enumeration (Selector)			See Table 8
Trigger Delay	Specifies the delay in microseconds(us) to apply after the trigger reception before activating it	SimulationTriggerDelay	Integer			In units of microseconds (us) See section 10.2
Trigger Filter	Filter for trigger, helps prevent signal de-bouncing. 8ns resolution, units in microseconds(us)	SimulationTriggerFilter	Float	Min. Val. 0 Max. Val. 34359738		In units of microseconds (us) See section 0
Trigger Software	Generates an internal trigger. SimulationTriggerSource must be set to Software	SimulationTriggerSoftware	Command	1 - Activate		
Trigger Event	Selects the trigger event	Simulation Trigger Event Mode	Enumeration	0	Disabled	
Mode	generation mode			1	RisingEdge	
				2	FallingEdge	
				3	AnyEdge	
Gen <i>Cam Cat</i>	egory: SimulationControl / TimerC	Control				
	Selects which Timer to configure		Enumeration	0x00	Timer0

Table 8 – Line selection options

Large array of GPIO is available for configuring trigger source from external signal generators, such as TTL, LVDS, LVTTL and OptoCoupled. The auxiliary GPIO signals can be used to initiate on-board events, transmitted to other devices or rerouted from other signals, such as CoaXPress triggers and other GPIOs. The GPIOs can be configured from the API and be set as a trigger sources. The API enables routing of any input to any output as well as to the CoaXPress IO and Trigger lines.

### 10.1 Simulation Trigger Activation

The trigger activation mode configures the generation of signal state. Default value is Rising Edge, which will trigger generation of a frame on signal rising edge event. The different modes functionality is as follows:

#### 1. Any Edge:

The frames will be generated both on rising and falling edges of the trigger source.

### 2. Rising Edge:

The frames will be generated only on rising edge of the trigger source. Falling edge of the source is ignored.

#### Falling Edge:

The frames will be generated only on falling edge of the trigger source. Rising edge of the source is ignored.

### 4. <u>Level High:</u>

High signal level enables a continuous image generated, Low signal level will halt the trigger generation.

#### 5. Level Low:

Low signal level enables a continuous image generated, High signal level will halt the trigger generation.

### 10.2 Simulation Trigger Delay

The trigger delay is a mechanism for postponing the outgoing signal for a specified number of microseconds (us). As a result, trigger will be issued after specified time delay to overcome known system latency or set trigger generation period. To disable, value 0 should be set.

### 10.3 Simulator Trigger Filter

The filter of the trigger signals acts as a de-bouncing mechanism for better noise immunity. By default the filter is disabled with the value of 0. The signal filter resolution can be set at 8ns intervals for high resolution functionality. If the trigger filter is set to a larger value than the width of the trigger pulse, then the pulse will be filtered out and no trigger will occur. Available interface in API provides input in microsecond (us); nevertheless, to achieve higher resolution, relevant fraction values should be entered after the decimal point.

### 10.4 Configuring Simulator Triggers

Configuring Chameleon II Simulator trigger sourced from remote host (e.g Frame Grabber). This example illustrates an optional configuration of Chameleon II Simulator trigger and Komodo CoaXPress Frame Grabber trigger, using Timer 0 as an input trigger source for incoming signals from the camera.

### 10.4.1.1 Camera Simulator configuration

- 1. "TriggerMode" configured to "Triggered" in order to set the Simulator to trigger mode.
- 2. "TriggerSource" configured to "Camera Trigger" in order to set the Simulator to trigger source.
- 3. The Trigger Filter resolution ("TriggerFilter"), Activation Mode ("TriggerActivation") and Trigger Delay ("TriggerDelay") parameters may be configured according to desired output.

Figure 9 – Chameleon II Simulator trigger configuration in Vision Point App

# 11 Analog Control

VOD and Pre Emphasis define the configurations of physical analog components responsible for synchronization with the host device. Therefore changing these values will influence directly on the stability of the communication with host device, and may cause link de-synchronization. The VOD and Pre Emphasis parameters summarized in the following tables.

Parameter	Description	Gen <i>Cam</i>	Туре	Type Possible va		Remarks
		name		Value	Gen <i>Cam name</i>	
Gen <i>Cam Cat</i>	egory: AnalogControl					
Vod	TX VOD settings	Vod	Enumeration (Selector)			See Table 10
Pre Emphasis	Transmitter Pre-Emphasis Lev	els PreEmphasis	Enumeration (Selector)			See Table 11

Table 9 – Analog Control parameters

Enum	Value	Output	Gen <i>Cam</i>

# 12 Support

The Support category describes the standard CoaXPress bootstrap registers for device and protocol information. The support bootstrap parameters are summarized in the following table.

Parameter	Description	Gen <i>Cam name</i>	Туре	Possible values		Remarks
				Value	Gen <i>Cam name</i>	
Gen <i>Cam Cat</i>	egory: Support					
Standard	Bootstrap register Standard	Standard	Integer			
Revision	Bootstrap register Revision	Revision	Integer			
Xml Manifest Size	Bootstrap register XmlManifestSize	XmlManifestSize	Integer			
Xml Manifest Selector	Bootstrap register XmlManifestSelector	XmlManifestSelector	Integer			
Xml Version	Bootstrap register XmlVersion	XmlVersion	Integer			
Xml Schema Version	Bootstrap register XmlSchemaVersion	XmlSchemaVersion	Integer			
Xml Url Address	Bootstrap register XmlUrlAddress	XmlUrlAddress	Integer			
lidc Pointer	Bootstrap register lidcPointer	lidcPointer	Integer			

Table 12 – Support category parameters

# 13 CoaXPress

The CoaXPress section describes the bootstrap registers to determine the configuration parameters of connection, as described in JIIA CXP-001-2013 (CoaXPress Standard) document. The CoaXPress parameters are summarized the following table.

Parameter	Description	Gen <i>Cam</i>	Туре	Possible values		Remarks	
		name		Value	Gen <i>Cam name</i>		
Gen <i>Cam Category</i>	: CoaXPress						
CXP Versions Supported	Bootstrap register. The bitmask indicates all version(s) of the CoaXPress specification supported by the Device	VersionsSupported	Integer			If CXP 2.0 is not implemented (CoaXPress_Revision_2_0_NotI mplemented) this parameter become "RO" for debugging purposes	
CXP Version Used	Currently selected version of the CoaXPress specification used to communicate between the Device and Host	VersionUsed	Enumeration	0x00010000 0x00010001 0x00020000	CXP 1.0 CXP 1.1 CXP 2.0		
Low Speed timeout	Low Speed timeout. 8ns resolution, units in microseconds(us). Default value is 800ms	LowSpeedTimeout	Integer	Min: Max:	0 34359738	Depends on CoaXPress_Revision_2_0_IsImp lemented	
Heartbeat period	Heartbeat period. 8ns resolution, units in microseconds(us). Default value is 10ms	HeartbeatPeriod	Float			Depends on CoaXPress_Revision_2_0_IsImp lemented	
Device Link ID	Bootstrap register DeviceLinkID	DeviceLinkID	Integer				
Master Host Link ID	Bootstrap register MasterHostLinkID	Master Host Link ID	Integer				
Control Packet Data Size	Bootstrap register ControlPacketDataSize	ControlPacketDataSize	Integer				
Stream Packet Data Size	Bootstrap register StreamPacketDataSize	StreamPacketDataSize	Integer				
Link Config	Bootstrap register LinkConfig	LinkConfig	Enumeration (Selector)			See Table 14 Values depend on TwelveG_IsImplemented	
Link Config Default	Bootstrap register LinkConfigDefault	LinkConfigDefault	Enumeration (Selector)			See Table 14 Values depend on <b>TwelveG_IsImplemented</b>	
Test Mode	Bootstrap register TestMode	TestMode	Integer				
Test Error Count Selector	Bootstrap register TestErrorCountSelector	TestErrorCountSelector	Integer (Selector)				
TestErrorCount	Bootstrap register TestErrorCount	TestErrorCount [TestErrorCountSelector]	Integer				
TestPacketCountTx	Bootstrap register TestPacketCountTx	TestPacketCountTx [TestErrorCountSelector]	Integer				
TestPacketCountRx	Bootstrap register TestPacketCountRx	TestPacketCountRx [TestErrorCountSelector]	Integer				
Image 1 Stream ID	Image 1 Stream ID	lmage1StreamID	Integer
